

Task: check project to indicate comments and errors

1. Wrong validation in “login with wrong email format credentials read data from fixture” test
(e2e/tests/login.test.ts)

```
it('login with wrong email format credentials read data from fixture', function () {
  loginPage.login(this.data.invalid_credentials.wrong_email_format.emailId,
this.data.invalid_credentials.wrong_email_format.password)
  loginPage.validateLoginError('Invalid email addresssssss.')
})
```

Should be:

```
it('login with wrong email format credentials read data from fixture', function () {
  loginPage.login(this.data.invalid_credentials.wrong_email_format.emailId,
this.data.invalid_credentials.wrong_email_format.password)
  loginPage.validateLoginError('Invalid email address.')
})
```

2. Redundant test myAccount.test.ts (e2e/tests/myAccount.test.ts) – test is not declared in the readme file, performs unnecessary functions.

It needs to be removed

3. Unclear option in **Readme.md** - Change “username and “password”

Should be removed

4. Test names in “describe” block should start with the word “Should”

Example:

```
it('Should login with wrong email format credentials read data from fixture',
function () {
  loginPage.login(this.data.invalid_credentials.wrong_email_format.emailId,
this.data.invalid_credentials.wrong_email_format.password)
  loginPage.validateLoginError('Invalid email address.')
})
```

5. Redundant validation in myAccount page object (cypress/e2e/page/myAccountPage.ts) (Because our test suite is to check LOGIN functionality, not LOGOUT)

```
public validateSuccessfulLogout() {
  loginPage.signinLink.should('be.visible')
}
```

6.Redundant validation of logout in Login test (**e2e/tests/login.test.ts**). *(Because our test suite is to check LOGIN functionality, not LOGOUT)*

```
myAccountPage.validateSuccessfulLogout()
```

7.Redundant test “**login with valid credentials**” in (**e2e/tests/login.test.ts**) *(because we have same test with fixtures use)*

8.Unnecessary import in **myAccount** page object (**e2e/page/myAccountPage.ts**) *(this import not in use)*

```
import { loginPage } from "../loginPage"
```

Should be deleted

9.Unnecessary scripts in package.json

```
"cy:e2e:run": "npm run clear && npm run cy:run && npm run report"
"report": "npx allure generate reports/ui/allure-results --clean -o reports/ui/allure-report && allure open reports/ui/allure-report"
"clear": "rm -r reports/** || true"
```

Should be deleted

10.For opening allure report in browser should be added script in package.json:

```
"report": "allure open docs"
```

11.In reame.md file should be added instruction how to open allure report.

```
**To open allure report in browser use:**
```

```
- npm run report
```

12.In workflow file “cyAllureRun.yml” name should be changed from:

```
name: Cypress Tests using Cypress Docker Image with allure-report
```

to (for example):

```
name: Cypress Tests with allure-report
```

(because we don't use docker image in this project)
